

Mobile Electronics

Audio 2000 can tailor a custom sound system to your car or SUV for the most critical listener without interfering with the physical and electronic architecture of your car. We can restore everything to stock should your lease terminate and you need to do so without being penalized for alteration.

Don't be shy. Many of our clients ask for things that today's manufacturers do not offer, which is why we have an engineering department that can cater to unusual requests. Whether it is integrating satellite radio or an iPod to your factory infotainment screen or a hand built custom tuned parametric equalizer that adds the perfect touches to give your vehicle recording studio sound you have been looking for, we can provide it.

Car Audio

The majority of today's cars no longer have a traditional car stereo. They now come equipped with an infotainment system that combines audio, navigation, and climate functions. All this makes upgrading the audio system more complicated. Audio 2000 specializes in integrating audiophile grade amplifiers, speakers and subwoofers to your existing head unit delivering stupendous sound quality without disrupting your car's electronic architecture. We also offer integration systems that display iPod text, Satellite radio and a rear view via a back up camera on your factory navigation screen. We invite you to contact us regarding any custom audio requests.

In-Car Video:

Keep your rear seat passengers occupied and entertained during your commute. Audio 2000 can provide custom made headrest monitors with built in DVD players that perfectly match your interior replacing the existing ones. These systems can be configured so that two passengers can independently watch different DVDs at the same time, play video games or enjoy live DIRECTV programming. All this can be confined to multi channel wireless headphones allowing the driver piece of mind. "Are we there yet?" will be rephrased to "We're there already!"

PLEASE VISIT OUR GALLERY TO SEE SOME OF THE INSTALLS WE HAVE DONE ON SOME OF THE WORLD'S FINEST CARS. YOU CAN BE NEXT.

Radar Detectors:

"We fix speeding tickets". Thanks to technology only offered by K40 electronics. A radar detector manufacturer so confident of their product, they offer to pay your speeding ticket during the first year of owning their product. Front and rear radar sensors are installed behind the front grill and rear bumper –strategically positioned for the fastest capture of radar signals, without being visible. Add the optional laser diffuser that jams police laser and you have the gold standard in speed detection.
